

# Making systems work for migrant health

Reflecting upon what you have heard today and your own understanding of support in your area:

1. What are the key parts of the system (organisations, services, people) you need to work with to support the health of migrant communities?
2. What are the gaps/ what needs to be strengthened?
3. Who are your actual or potential allies/ who can help?
4. What can you do to influence the key players/decision-makers?
